

How To - Allow Comments

Click **Settings - Discussion** - you will now see Defaults for New Posts.

Make sure **Allow Comments - Send Pingbacks** - are both active. See the screenshots below. (Receive Pingbacks is optional)

Deactivate 'Require users to log in', leave it blank. Word-press users are already logged in and don't need to log in again.

The screenshot shows typical settings for most bloggers. However, it's entirely up to you whether you approve comments before publication, the option is lower down this page, but not shown here.
